During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone amen. Note that the variation annotation may not be found in the sequence submission only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality) = 30); an attempt was made to resolve all sequencing problems, such one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information or the WORMPEP database can be found at the primary accession thromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at the their source databases:

RPI-17111 is from the library RPCI-1 constructed by the group of price and a found at the condition of the condition of the feature described by the Sanger centre Chromosome form por further and preserved by the group of

It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                    CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                at URL:

                                                                                                                                                                                                                                                                                                                                          NOTE: This is a 'working draft' sequence. It currently consists of 27 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Center clone name: 200_119
Sequencing vector: M13, M77815, 10% of reads
Sequencing vector: M13, M77815, 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 16794 bases at least Q40
Consensus quality: 160262 bases at least Q30
Consensus quality: 162545 bases at least Q20
Insert size: 171000; agarose-fp
Insert size: 164295; aum-of-contigs
Quality coverage: 4.7 in Q20 bases; sum-of-contigs
Quality coverage: 4.9 in Q20 bases; sum-of-contigs

2326 NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft' sequence. It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Sep 21, 2002 this sequence version replaced gi:22296651. 14631 AAATAGCAAATGGAAGGCTGGGCACGGTGGCTCACACCTGTAATCCTGGCACTTTGGAAG 2327 CATCTCTACTAAAAACACAAAAAATTAGCCGGGCGTGGTGGTGGCACATGCCTGTAATCCCAG 14511 CGTCTCTACTAAAATTACAAAAATTAGCTGGGGCGTGGTGGGGACATGCCTGTAAATCCCAG 2387 CTACTCAGGAGGCTGAGGC-GGAGAATTGCTTGAACCCGGAAGGTGGAGGTTGTTGCGGT 2207 ATATAAAAATACCCCGGCCAGGCACGGTGGCTCACGCCTGTAATCCCAGCACTTTGGGAG 2267 GTGGGTGGATCACCTGAGGTCGGGAGTTCGAGACCAGCCTGACCAGCATGGTGGAACCCC 14451 CTACTCAGGAGGCTGAGGCAGGAGAATTGCTTGAACCCGGGAGGTGGAG---GCTGCAGT 4; Gaps 2446 GAGCTGAGATTGCACTATTGCACTCCAGCCTGGGCAACAGGAGTAAAACTCC 2497 arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved. 8.0%; Score 201.6; DB 2; Length 174054; 85.3%; Pred.                               MAPPING INFORMATION: Mapping information for this clone was provided by Dr. John D. Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu)
                                                                                                                                                                                                                                                                                                                             The clone sequenced to the left is RPI1-153B21, 200 bp overlap. Actual start of this clone is at base position 133171 of RPI1-153B21; actual end is at base position 129625 of RPI1-62F14. Location/Qualifiers

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft' sequence. It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                       Submitted (20-JAN-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

The invention provides nucleic acid markers of prostate, breast and bladder cancer. The markers are indicators of malignant transformation of prostate, breast and bladder tissues and are diagnostic of the potential for metastatic spread of malignant prostate tumours. The nucleic acid can also be used as targets for therapeutic intervention in prostate cancer, benign prostatic hyperplasia (BPH), bladder cancer or breast cancer. The markers may be used to design specific probes and primers, for the rapid Nucleic acid marker; biomarker; tumour; prostate cancer; bladder cancer; benign prostatic hyperplasia; BPH; breast cancer; human; immunodetection; Novel RNA biomarkers for diagnosis, prognosis and management of prostate, breast and bladder cancer. Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

analysis of prosterie, bladder or breast bloopsy samples. The probes and primers may also be used for in situ hybridization or in situ PCR detection and diagnosis. They may also be used to identify and isolate full length gene sequences form various DNA libraries. Antibodies against the polypeptide products of the markers can be used to treat prostate cancer. bladder cancer or breast cancer. The encoded proteins may be used to detect antibodies. The proteins and antibodies can be used in immunodetection methods for detecting or quantifying the cancers and for clinical diagnosis of these cancers. The antibodies may also be used for radioimaging to quantify and localize the encoded proteins	Sequence 2506 BP; 822 A; 519 C; 446 G; 718 T; 0 U; 1 Other;	Query Match 100.0%; Score 2505.6; DB 3; Length 2506; Best Local Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 480
                                                                                                                                                                                                                    The sequence represents nucleic acid biomarker UC band 28 #3, used in detection of prostate, breast and bladder cancer. Biomarker nucleic acid sequences can be used as hybridiseation probes and primers that specifically hybridise to prostate cancer, benign prostatic hyperplasia (BPH), bladder cancer or breast cancer markers. Proteins encoded by the nucleic acid markers can be used to produce antibodies for the detection of prostate, breast or bladder cancer. The nucleic acids can be used as targets for therapeutic intervention in these diseases, in the identification and isolation of full-length gene sequences, including regulatory elements for gene expression, from genomic human DNA libraries, as hybridisation probes for screening genomic human DNA libraries. The kits comprising the nucleic acid sequences are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 TIGCTACAGAGCTACAATTCAATTTACAGTAGGCCACCATGAGGGCCTTCTTAAGGAACC

The invention provides nucleic acid markers of prostate, breast and bladder cancer. The markers are indicators of malignant transformation of prostate, breast and bladder tissues and are diagnostic of the potential for metastatic spread of malignant prostate tumours. The nucleic acid can also be used as targets for therapeutic intervention in prostate cancer. The markers may be used to design specific probes and primers, for the rapid analysis of prostate, bladder or breast cancer. The markers may also be used for in situ hybridization or in situ PCR detection and diagnosis. They may also be used to insitu ya nisolate the polypeptide products of the markers can be used to treat prostate the polypeptide products of the markers can be used to treat prostate cancer. bladder cancer or breast cancer. The encoded proteins may be used concert. bladder cancer or breast cancer. The encoded proteins may be used to immunodetection methods for detecting or quantifying the cancers, and for clinical diagnosis of these cancers. The antibodies may also be used for radioinmaging to quantify and localize the encoded proteins
                                                                                                                                                                                                                                      Novel RNA biomarkers for diagnosis, prognosis and management of prostate, breast and bladder cancer.

specifically hybridise to prostate cancer, benign prostatic hyperplasia (BPH), bladder cancer or breast cancer markers. Proteins encoded by the nucleic acid markers can be used to produce antibodies for the detection of prostate, breast or bladder cancer. The nucleic acids can be used as targets for therapeutic intervention in these diseases, in the identification and isolation of full-length gene sequences, including regulatory elements for gene expression, from genomic human DNA libraries, as hybridisation probes for screening genomic human DNA libraries. The kits comprising the nucleic acid sequences are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

```
nucleic acid segments shown in AAV16881 to AAV16885, AAV16890 to
CC AAV16903, AAV26351 and AAV26352 which can act as human prostate cancer
AAV16903, AAV26351 and AAV26352 which can act as human prostate cancer
CC Markers are provided in the specification. It also provides methods for
identifying markers for human prostate cancer and for detection of
prostate cancer cells. The markers can be identified by amplifying human
CC prostate RNA to provide nucleic acid amplification products, separating
CC the products and identifying those RNA that are differentially expressed
CC between human prostate cancers versus normal or benign human prostate.
CC acid in a sample can be detected by detecting a nucleic
CC acid in a sample, the nucleic acid being a prostate cancer marker.
CF Prostate cancer cells in a sample. Antibodies against the protein
CC for prostate cancer cells in a sample. Antibodies against the protein
CC encoded by the marker nucleic acid fragments, inhibitors of the protein
CC and oligonucleotides antisense to the markers can be used for the
CC diagnosis of human prostate cancer. The antibodies can also be used for the
CC diagnosis of human prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1745
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1865

                                                                                                The invention relates to methods for diagnosing prostate cancer or benign prostatic hyperplasts cells in a biological sample. The method uses oligonucleotide probes specific for marker genes associated with tumour differentiation and progression in Reverse Transcription Polymerase Chain for detecting and monitoring the progression of benign prostate chain for detecting and human prostate cancer (the most prevalent form of and a major cause of death in males) prior to the tumor undergoing metastasis, therefore allowing the optimal method of treatment to be determined before the condition becomes life threatening. The present sequence represents a claimed marker gene fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1686 ACAACGACACTTCAGGAGTTAAATATTTTTCATCAAACATTGGATTTTTCCTTAACGCT 1745

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides nucleic acid markers of prostate, breast and bladder cancer. The markers are indicators of malignant transformation of prostate, breast and bladder tissues and are diagnostic of the potential for metastatic spread of malignant prostate tumours. The nucleic acid can also be used to therapeutic intervention in prostate cancer. The markers may be used to design specific probes and primers, for the rapid analysis of prostate, bladder or breast biopsy samples. The probes and cancer. The primers may also be used for in situ hybridization or in situ PCR offiction and diagnosis. They may also be used to identify and isolate thil length gene sequences form various DNA libraries. Antibodies and cancer, bladder cancer of the markers can be used to treat prostate to detection methods for the markers can be used to treat prostate cancer, bladder cancer or breast cancer. The encoded proteins may be used to detection methods for detecting or quantifying the cancers, and for climical diagnosis of these cancers. The antibodies may also be used for radioimaging to quantify and localize the encoded proteins

PT New nucleic acids as biomarkers and targets useful for detecting,
T diagnosing, prognosing, and in developing treatments for prostate, breast
XX
PS Claim 2; Col 79; 78pp; English.
XX
CC detection of prostate, breast and bladder cancer. Biomarker nucleic acid
detection of prostate, breast and bladder cancer. Biomarker nucleic acid
sequences can be used as hybridisation probes and primers that
cC Geptifically hybridiset cancer markers. Proteins encoded by the
nucleic acid markers can be used to produce antibodies for the detection
of prostate, breast or bladder cancer. The nucleic acid as
cC targets for therapeutic intervention in these diseases, in the
identification and isolation of full-length gene sequences, including
cc targets for therapeutic intervention in these diseases, including
cc targets for therapeutic on probes for screening genomic human DNA
cc libraries as hybridiaation probes for screening genomic human DNA
cc libraries. The kits comprising the nucleic acid sequences are useful for
cc detecting bladder, breast or prostate cancer cells in a biological sample

The present invention describes human cancer-associated (CA) nucleotide sequences (I). Also described: (1) an expression vector comprising (I); (2) a host cell comprising (I) or the expression vector; (3) a microarray for detecting a CA nucleic acid; (4) an isolated polypeptide encoded within an open reading frame of a CA sequence; (5) an isolated antibody, or its antigon binding fragment, that binds to the above polypeptide; (6) a hybridoma that produces the monoclonal antibody and a pharmaceutical composition comprising the antibody and a pharmaceutical expipant; (8) a kit for detecting or diagnosing cancer cells, comprising the above (monoclonal) antibody or polymucleotide that selectively (1) apprindises to any of the polymucleotide sequences mentioned above; (9) methods for diagnosing cancer or for detecting the presence or absence of cancer cells in an individual; (10) a method for inhibiting growth of cancer cells in an individual; (11) a method for inhibiting growth of cancer cells in an individual; (12) an electronic library comprising the polymucleotide or polypeptide, or their fragments, comprising the polymucleotide or polypeptide, or their fragments, comprising the polymucleotide or polypeptide, or their fragments, comprising the polymucleotide or polypeptide, or their fragments, comprising the polymucleotide or polypeptide, or their fragments, compressing cancer associated with expression of a polypeptide or the attibody in a test cell or serum sample; (15) a cattivity of a CA protein encoded by the above nucleic acid molecule; and (16) a method for treating cancers (1) has cytostatic acid molecule; and cathod of the present invention can be used for treating cancer, especially lymphomas. They may also be used in an treating cancer in the receptor antiagonist; and methods of the present invention can be used for preventing cancer, especially lymphomas. They may also be used in the exemplification of the present invention. Note: The sequence dors the prevented that the parent invention of the prese
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New cancer-associated nucleic acid for diagnosing, preventing or treating cancer (e.g. lymphoma) or for screening agents that may be used for treating or preventing cancer.
                                                                                                                                                                                                                                                                                                                                                   human, cancer-associated gene, cancer-associated protein, cytostatic, gene therapy, vaccine, tyrosine kinase antagonist;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to cancer associated sequences (ADQ97025-ADQ98004). The sequences are useful for the diagnosis, prevention and/or treatment of cancer, such as leukemia and lymphoma. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formate directly from WIPO at

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 40104; 3071pp + Sequence Listing; English.

ANK54951 to AAK64702 encode the human immune/haematopoietic antigen (1)
amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
example, they may be used to treat disorders associated with decreased
contession by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
cuplement the patients own production of (I). Additionally, (I)
cuplement the patients own production of (I) additionally, (I)
cuplement the patients and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastases of haematopoietic-derived cells. AAK64703
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK54950 and AAM82169
represent sequences used in the exemplification of the present invention

Sequence 2680 BP; 723 A; 594 C; 630 G; 733 T; 0 U; 0 Other;

The intention retails to hovel genes (Aballuda-Aballuda) and proteins medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.

The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic ansemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy, and (f) infectious diseases such as wiral, bacterial, fungal and parasitic infectious diseases avoid as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel genes (ABA11004-ABA21534) and proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; SEQ ID NO 7812; 1701pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ruben SM

Rosen CA, Barash SC, Ruben (HUMA-) HUMAN GENOME SCI INC

WPI; 2001-541565/60

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cance and metastases.

cancers

Disclosure; SEQ ID NO 7813; 1701pp + Sequence Listing; English

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant)agonists are useful in the adagnosis, treatment and prevention of: 13 cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune cancers e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing (e) neurological diseases such as wycardial anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 42396; 3071pp + Sequence Listing; English.

cartivity, and can be used in AMM812170 to AAM81921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diagnosis may be used in the prevention, diagnosis and treatment of diagnosis and treatment of diagnosis and treatment of diagnosis and treatment of diagnosis and treatment of diagnosis and treatment of diagnosis and treatment of diagnosis and treatment of diagnosis or deletions in a patient's genome complex they may be used to treat disorders associated with decreased that affect the activity of (I) by expression proteins or to supplement the patients own production of (I). Additionally, (I) collaboration of the secreted (I), by inserting the polynucleotides may be used to produce the secreted (I), by inserting the collaboration diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 cancers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAK54921 to AAK54503 and AAM82169 represent sequences used in the exemplification of the present invention AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

Sequence 14417 BP; 3988 A; 3462 C; 3356 G; 3611 T; 0 U; 0 Other;

Rosen CA, Barash SC, Ruben SM,

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis

Disclosure, SEQ ID NO 26628; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polymucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
c supplement the patients own production of (I). Additionally, (I)
c polynucleotides may be used to produce the secreted (I), by inserting the
nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastesses of haematopoietic-derived cells. AAK64703
c to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54951 to AAK64950 and AAM82169
crepresent sequences used in the exemplification of the present invention

Sequence 14417 BP; 3611 A; 3356 C; 3462 G; 3988 T; 0 U; 0 Other;
